

MINI TARGA RAZE

MINI.REVOZPORT.COM

IT'S TIME TO INVEST IN YOUR JOY

A dark, moody landscape at dusk or dawn. The sky is a deep, dark blue, transitioning to a lighter, hazy glow near the horizon. The foreground is dominated by a dark, textured surface, likely water, which reflects the faint light from the horizon. The overall atmosphere is serene and contemplative.

MINI TARGA RAZE

AERO PACKAGE

(For all Roadster / Coupe)

(For non “Targa Raze” aero package)

Duckbill Trunk Spoiler (FRP / Carbon)
GT Trunk Spoiler (require deactivation of lift spoiler)
Add-on Roof in Carbon
Add-on Roof Spoiler in Carbon

Performance Parts

INTRODUCTION

To celebrate the milestone of Revozport achieving the asia's 1st ISO9001:2008 QS certificate by SGS & TUV SUD, the company releases the new aero and performance kit for the new Mini R58 Coupe / R59 Roadster. Completely designed in-house by its designer from the UK office, the sleek and sporty Mini Coupe has turned into an extreme sports coupe that weight 30kg lighter and a power boost from 181hp to a staggering 250hp. To achieve this, Revozport team up with the engineering team at TARGA Racing whom is in charge of building the performance kit and the aerokit is complete built with carbon composite fibre with the latest curing method.

30kg Lighter by use of carbon composite product

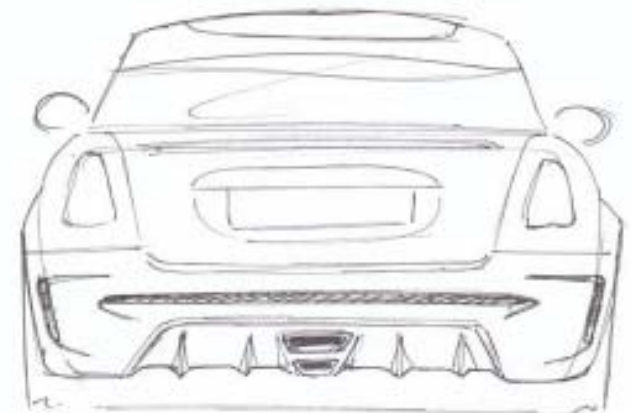

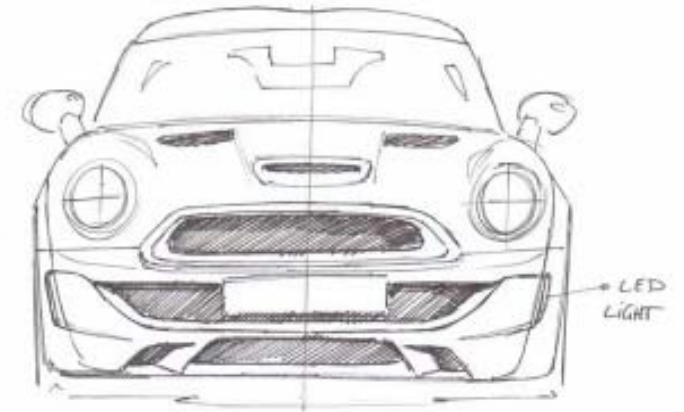

The Mini Targa Raze consist of a complete aerokit that lightens the car by 30kg and widen the wheel track by 15mm both front and rear. Thanks to the extensive use of carbon & kevlar composite material. The complete kit consist of 23 parts including a complete front bumper that equips with integrated LED DRL, a lightweight vented bonnet, a rear bumper with integrated chrome exhaust pipe and LED reverse and foglight, Side skirt that has air scoops, widened front and rear fender trim, a duckbill lip spoiler with an optional GT wing and the most amazing part, the complete carbon fibre roof panel. The complete carbon roof panel is no stranger to Revozport as this product and development technology has been widely use in for application to BMW 1M, E92 M3, Z4 Coupe, Skyline GTR R35 and more. The weight savings is incredibly significant for such a compact car.

Performance Upgrade

Performance upgrade was achieved through the use of a complete race engineered Titanium cat back exhaust that only weigh 5kg, a bespoke ECU mapping, carbon induction pipe, bigger intercooler and a pair of tricked camshafts. The result is a staggering 250hp

DESIGN

A wide-angle photograph of a concrete dam with water cascading over its spillway. The dam is in the foreground, and the water is turbulent. In the background, there are rolling green hills under a soft, orange and pink sunset sky. Power lines are visible in the distance. The text "THE ROAD WILL NEVER BE THE SAME." is overlaid in white, bold, serif font on the left side of the image.

THE ROAD WILL NEVER BE THE SAME.
